<b>Abstract</b>	Local potency development becomes a substantial aspect to improving local competitiveness. Indonesia leading sector commodity is palm sugar. Its production depends on worker productivity known as penderes or tappers (a man who take coconut water for making a palm sugar). Their job has a high risk, so that they need financial aid. The local government (Banyumas) has launched Insurance Program for tappers to respond it. This article discusses about the implementation of insurance programs for tappers in human governance perspective, which includes social accountability, ethics and moral principles. Besides that there were two determinant factors to reach humanity governance; they are about regulation and budget constraints.
