<b>Abstract</b>	<p>Previous research have shown that the performance of the implementation of the National Program of Rural Self Empowerment (PNPM-Mandiri Perdesan) in Banyumas is determined by variables: the capacity of the target group, the capacity of the implementing agencies, the quality of communication and socialization, as well as monitoring (monitoring) as an intermediate variable. Quantitative research involving 400 respondents spread 5 districts and 20 villages were selected at random has been done. Data were processed and analyzed include correlation, regression testing, and test the model. The results of this study indicate that the implementation of PNPM-Mandiri Rural models tested can be used to examine the implementation of PNPM Mandiri Rural elsewhere and can be used to check for other poverty reduction programs based on empowerment.</p>
