Abstract	<p>Infertility and its treatment may cause life crises in infertile women. As a matter of fact, the success of infertility therapy has not reached 100 percent yet, this problem can lead a woman to have an increased stress when failure occurs. The purpose of this qualitative descriptive study to explore the phenomenon of women's experience with infertility in the aftermath of unsuccessful medical treatment. Six participants were gained by purposive sampling method. Data collection was obtained through deep interview complemented with field data. Interview was recorded, transcribed, and then was analyzed using Colaizzi's method. The result of this study has three main topics are: (1) Self perception, (2) People who are meaningful in my life, (3) Support which makes me stronger. This study result gives useful information for maternity nursing to many requirements and expectations in women's health that unsuccessful infertility treatment especially social support needs.</p>
