| Abstract | Purwoceng (PimpinellaÃ f Â,Ã, pruatjanÃ f Â,Ã, Molk) is an original Indonesian herb which is knownÃ f Â,Â, to haveÃ f Â,Ã, an aphrodisiac effect. The active compounds in Purwoceng potentially have hepatotoxic and nephrotoxic effects. This study was aimed to analyze the effect of subchronic administration of Purwoceng roots ethanol extract to Wistar Strain ofÃ f Â,Â, Rattus norvegicusÃ f Â,Ã, rats.Ã f Â,Â, TheÃ f Â,Â, methodÃ f Â,Ã, of this subchronic toxicity study was an experimentalÃ f Â,Ã, post test only with control group design. Forty maleÃ f Â,Â, Rattus norvegicusÃ f Â,Â, were randomly divided into four groups and get 28-days treatment. Group A as control receivedÃ f Â,Ã, aquadestÃ f Â,Ã, and 1% CMCÃ f Â,Â, (carboxymethyl cellulose), group B, C, and D were given Purwoceng roots ethanol extract of 42, 84, and 168 mg/KgBW/day and 1% CMC.Ã f Â,Ã, Parameters tested were the levels of urea, creatinine, SGPTÃ f Â,Ã,Â, (serum glutamic pyruvic transaminase), SGOT(serum oxaloacetic pyruvic transaminase), kidney and hepar histopatology.The results showedÃ f Â,Â, aÃ f Â,Â, statisticallyÃ f Â,Â, significant for the liver histopathological in group B, creatinine, urea, and kidney histopathologyÃ f Â,Ã, a f AÂ,Â, in group C.Ã f A,Â, Our study concluded that subchronic administration of Purwoceng (PimpinellaÃ f Â,Â, pruatjanÃ f Â,Â, Molk) roots ethanol extract could induce hepatotoxicity at the 42 mg/KgBW/day dose level and nephrotoxicity at the 84 mg/KgBW/day dose level. |
