Abstract	In the rainy season, land movement disasters are common in vulnerable areas. In November 2020, there was a landslide disaster in Sirau Village, Purbalingga. This phenomenon needs to be continuously informed to the public parties in order to minimize the risks and losses as little as possible. This community service activity aims to provide socialization and understanding to government officials and the community about landslides at the location. These activities are using methods of literature study, field surveys and direct discussion in the field. The landslide disaster in Sirau Village is interpreted as being caused by several factors, including: morphology, lithology, geological structure, weathering, rainfall, and land use
