| <b>Abstract</b>       | <p>Abstract. In Mandarin there is a suffix that causes a phonological process, namely in the word with the suffix addition to the suffix -r, called erhuayun (ㄛㄨㄞㄩㄣˊ ㄛㄨㄞㄩㄣˊ ㄛㄨㄞㄩㄣˊ). The purpose of this study was to analyze phonology in the word that has a suffix -r in Mandarin using a generative phonological approach. Data is obtained from Chinese subject books. The results in this study are in the word with the affix suffix -r divided into two, namely not experiencing phonological processes and experiencing phonological processes. Words that do not undergo phonological processes are in words with the sound suffixes /a/, /e/ and /u/. The phonological process that occurs in the word suffix -r is in the form of the addition of sound and sound absorption. The addition of sounds occurs when the sound /f/ appears before the suffix -r. Sound suction occurs in words with the sound suffixes /n/, /ŋ/, /l/ and /o/. Phonological processes are described using distinctive feature rules.</p> |
