Abstract	This research was conducted to explain the differences in the results of research on the effect of entrepreneurial orientation on marketing performance by adding innovation capability as a mediating variable. This research method uses quantitative methods with the object of this research being SMEs in Kuningan Regency. The sampling technique used is random sampling method with a sample size of 100 respondents. This study uses a regression analysis tool with a product of coefficients in facilitating testing of mediating variables. Based on the results of hypothesis testing, it is known that all of them are supported by a significance level that meets the specified requirements.
