Abstract	This research concern with application of discrete Hopfield neural networks for recovering data. Using associative memoriesÃ,Â properties of discrete Hopfield neural networks we can store a set of data patterns as a memories. The basic concepts of using discreteÃ,Â Hopfield neural networks as associative memories is to interpret the systemÃ¢Â€Â™s neurons evolution as a movement of input pattern toward the one stored pattern most resembling the input pattern. The result shows that the application could recover false data to its origin.
